TECHNICAL SKILLS

- React
- TypeScript
- Jest
- React Hooks
- HTML
- User Design
- Redux Toolkit
- CSS
- Python
- Context API
- Node.js
- Selenium

EXPERIENCE

Epsilon, San Francisco, CA - Senior Software Engineer

2021- present

Tools: [React Hooks](#) | [Redux Toolkit](#) | [User Design](#) | [Material-UI](#) | [Python](#) | [Selenium](#)

- Increased efficiency and consistency in project setup by implementing new standards for React Hooks and Redux, resulting in a 30% decrease in code duplication across projects and a 35% reduction in reported bugs within the first month of implementation.
- Improved satisfaction and usability with the existing website by redesigning and implementing UI changes throughout the site to create a seamless, consistent, and intuitive user experience, resulting in increased efficiency and business outcomes.
- Enhanced application performance and usability by upgrading the application from Material-UI Version 4 to Material-UI Version 5, resulting in increased satisfaction and engagement.
- Elevated the visual aesthetics and usability of the project by creating mockups and implementing new design themes and color palettes, resulting in a more engaging and user-friendly interface.

Big Commerce, San Francisco, CA - Software Engineer

2019 - 2021

Tools: [React Hooks](#) | [Redux](#) | [TypeScript](#) | [Material-UI](#) | [Jest](#) | [PHP](#)

- Successfully designed and implemented a new web-app project for merchants to configure high-facet filters, contributing to the company's rapid growth leading up to its \$216 million IPO in 2020.
- Developed the project from inception to launch using React hooks, Redux, Typescript, styled-components, and BigDesign.
- Enabled merchants to add and customize 12 additional filters per category visible on the storefront, enhancing their control panel and improving storefront search for customers.
- Led the end-to-end development of the new product feature while collaborating with, mentoring, and delegating responsibilities to junior colleagues while also adhering to strict delivery timelines.
- Generated new revenue by developing this tool, which was used by over 60K merchants.
- Collaborated with a team to improve search functionality on the Elastic Search team.

PROJECTS

Style Me AI, Full Stack Developer - [React](#) | [Codex](#) | [Replit AI](#) | [GitHub](#) | [Style Me AI](#)

- Built a styling inspiration web application that helps users discover and organize outfit ideas.
- Developed a responsive React interface using reusable components and modern UI patterns.
- Implemented outfit recommendations based on weather conditions and occasion based styling.
- Added specialized features including faith-based styling considerations and makeup expiration.
- Integrated AI-assisted tools to enhance styling discovery and personalized content exploration.
- Focused on visual design, layout composition, and user experience to create an engaging

browsing experience.

Slay All Day, Full Stack Developer - [React](#) | [react-router-dom](#) | [CSS Grid](#) | [Material-UI](#) | [GitHub](#) | [Slay All Day](#)

An app where users can search through makeup products across purchasing sites, all in one place.

- Created a search functionality that filters by name and product type.
- Added specific links to product's websites to make purchases.

EDUCATION

Benedictine University, Bachelor in Health Science 2012 - 2016
